"Essential Gynecologic Oncology will be the most comprehensive single resource on the topic. Currently, all texts in the field present either a medical discussion or surgical procedures. Available surgical atlases are either terribly outdated or shockingly expensive. EGO will be the first to combine these two kinds of resources in a single affordable volume. Each topic is written by experts and is presented in an easily accessible consistent presentation that highlights clinical practice guidelines along with the diagnosis and treatment of specific malignancies. This authoritative coverage is reinforced by the state of the art surgical atlas which offers a richly illustrated, overview of essential procedures designed to build your knowledge and confidence"--Provided by publisher.

The Atlas of Surgical Oncology is a comprehensive reference of the most common and most important oncologic procedures. It includes pertinent anatomy, methods of exposure, en block resection, pitfalls, complications, and intraoperative variations in procedures. Each chapter contains practical information clustered around the description of surgical treatment, with minimal review of the literature and references, except where they will provide further information on management or description of alternative surgical techniques. Extensive artwork with over 660 illustrations!. Over 660 detailed illustrations demonstrate each technique Special focus on the indications, potential complications, and results of each procedure, as well as areas of controversy The best new technique refinements in existing techniques include new ways to perform abdominoinguinal incisions, remove tumours in the base of the mesentery, remove a portion of the pelvis without amputation, construct a Roux-en Y loop, perform sacral resection, resect the anterior compartment and decrease the risk of complications through hemipelvectomy and forequarter amputation.

The aim of the 4th edition of the Atlas of Nuclear Cardiology is to provide physicians and students in cardiology, radiology, and nuclear medicine who want the latest information in the field of cardiovascular nuclear medicine up-to-date and comprehensive information on advances in instrumentation, radiotracers, protocols, and clinical studies. Unlike other books that are narrow in their scope of either technology and technique or clinical studies, the 4th edition of the Atlas will present diagnostic algorithms and schematic diagrams integrated with nuclear cardiology procedures generously interspersed with color illustrations to emphasize key concepts in cardiovascular physiology, pathology, and metabolism relevant for the clinical practice of cardiology. The atlas emphasizes today's most current information, meeting the requirements for those who will be using the book as a reference source for certifying or re-certifying in cardiology, nuclear cardiology, nuclear medicine or radiology. Hybrid PET/CT and SPECT/CT represent new technologies that were introduced recently in clinical medicine and are evolving rapidly with several improvements in instrumentation, imaging procedures as well as in clinical trials that support the expanded role of these technologies in clinical practice. As such, an updated 4th edition of the Atlas is critical in order for the clinicians remain current with the imaging field and maintain their skills. Imaging protocols with the se technologies have to be updated and/or expanded in order to acquire high quality images at a reduced radiation burden to the patient while advancing the application of these techniques for more advanced disease detection. Accordingly, beyond significantly updating the chapters from the 3rd edition, 2 new chapters will be introduced in the 4th edition, which reflects the expanded clinical applications of the technologies in the past 3 years. The new chapters are as follows: "Hybrid SPECT/CT and PET/CT Imaging" and a dedicated chapter on "Radiation Safety and Exposure: Clinical Decision-Making and the Risk-Benefit Ratio". Chapter 7 from the 3rd edition will be

deleted. The updated Atlas will serve as a reference source for all cardiologists, radiologists, and nuclear medicine physicians interested in the most up-to-date approaches to noninvasive diagnostic cardiovascular nuclear imaging techniques for the evaluation of patients with known or suspected coronary artery disease as well as non-coronary heart disease. It will also serve as a ready reference textbook for medical students and residents interested in the practice of cardiovascular medicine.

If a student does not meet the minimum required score set by the state, it's an indication that the student needs more academic preparation. The high school is then required to provide postsecondary preparatory instruction. All students enrolled in public high school in the state of Florida are required to take the PERT in the eleventh grade. The PERT tests students' abilities in math, reading, and writing. The test directly tests for competence for intermediate algebra and freshman level composition. The PERT is not timed, and each section has thirty questions. Scoring The PERT is not a test to pass or fail; it's used to determine the best academic path toward college for students. It's important for students to take the PERT seriously (even though it isn't graded) to ensure they are placed in the most appropriate classes. The PERT is scored by section in a range of 50 - 150, with "cut scores" throughout (so students will get three different scores). There are three or four tiers (depending on the section) of cut scores to determine what level

students are currently at.
