Carpenter, along with a team of expert contributors, the "Pink Book" provides an authoritative, single source of information that is hard to find elsewhere. A logical organization makes it quick and easy to find important information, with each section devoted to a single animal and chapters within each section organized by body system. Over 400 photographs and illustrations highlight key concepts such as radiographic interpretation and the main points of diagnostic, surgical, and therapeutic techniques. A chapter on ophthalmology provides hard-to-find information on eye care for ferrets, rabbits, rodents, and other small mammals. Coverage of preventive medicine includes basic biology, husbandry, and routine care of the healthy animal. The drug formulary supplies dosage instructions for ferrets, rabbits, guinea pigs, chinchillas, hamsters, rats/mice, prairie dogs, hedgehogs, and sugar gliders. Chapter outlines offer at-a-glance overviews of the contents of each chapter. Handy tables and charts make it easy to find key information. Expanded Zoonotic Diseases chapter adds more depth along with the latest information on the rising potential for disease transmission to humans as exotic pets become more popular. Additional surgical procedures for each species are included, some with step-by-step instructions accompanied by color photographs and line drawings. Full-color images show the sometimes minute structures of these small animals and make accurate diagnoses easier, especially for lymphoproliferative diseases of rabbits, endoscopy, cytology, and hematology.

True experiences of a Georgia country boy who grew up to fly in Vietnam's non-war. Stories to make you not only smile and laugh, but ponder life's mysteries and blessings. Stories the author believes could be told and re-told to generations. Autobiographical in the sense that the author lived and loved in the times and events chronicled. Written just as a storyteller might weave tales of adventure, love, heroism, family, friends, and deaths of comrades. The little stories that make life real. Read along as the author grasps the finality of death as a first grader, then at 16-years, stares into the barrel of a .38 revolver. Visit the back roads of Cuba during Castro's revolution, meet Miss America, hear about Connie Francis, and talk with Tennessee Williams. Then orbit overhead while John Glenn launches into history. Climb in the cockpit as co-pilot for gripping flight experiences during 3 tours to war-torn Vietnam. Enjoy unusual personal and flight experiences while in scenic Italy for author's last duty station before military retirement. Then the real change of life: At 41, a beautiful baby girl enters the scene. Add a thief's break-in while on vacation at the beach, two cancer scares, the impulsive yen to write a book, all while trying to decipher the author's version of the meaning of life. Find all the above plus lots of little sidebar stories that make life so real, so interesting, so enjoyable -it's all there in 370 pages of Dress Whites, Gold Wings.

alternative medicine options when treating conditions related to the digestive system. Readers will find more than 70 chapters of succinct information written in a user-friendly format inside *A Guide to Alternative Medicine and the Digestive System*. “Dr. Anil Minocha is well-known for writing useful, practical guides for quality care. His newest text, *A Guide to Alternative Medicine and the Digestive System* is no disappointment. This is an eloquent and elegant evidence-based approach to a challenging area.” -Jack A. Di Palma, MD, University of South Alabama, Former President of the American College of Gastroenterology “Dr. Minocha is to be applauded for his courage in tackling an issue, CAM, that the medical profession has traditionally chosen to ignore in the hope that it would simply go away. That CAM has stubbornly refused to disappear is a testament to its popularity with the general population and demands that we take it seriously, analyze why it is used and by whom and critically assess its efficacy and risks. For providing us with an accessible, fair and comprehensive critique of CAM in the context of modern medical practice, we all owe a debt of gratitude to Dr. Minocha.” -Eamonn Quigley, MD, University College Cork, Ireland , Former President of the American College of Gastroenterology

Now in its third edition, this trusted clinical guide enables both the busy practitioner and student to review or to learn about a range of pathologies, conditions, examinations, diagnostic procedures, and interventions that can be effectively used in the physical rehabilitation of older people. It presents a broad overview of age-related physiological changes as well as specific professional discipline perspectives. Organized into eleven distinct and interrelated units, the first unit begins with key anatomical and physiological considerations seen with aging which have significant impact on the older person. The second and third units go on to review important aging-related conditions and disorders of the musculoskeletal and neuromuscular/neurological systems respectively. Neoplasms commonly encountered in older people are the focus of the fourth unit; while aging-related conditions of the cardiovascular, pulmonary, integumentary and sensory systems are presented in units five through seven. Unit eight highlights a range of specific clinical problems and conditions commonly encountered with older patients. Critically, all of these units emphasize important examination and diagnostic procedures needed for a thorough evaluation and stress interventions that can be of significant benefit to the older patient. The ninth unit presents select physical therapeutic interventions that are especially important in managing rehabilitative care. Key societal issues related to aging are discussed in the tenth

Sea urchins are a major component of marine environments found throughout the world's oceans. A major model for research in developmental biology, they are also of major economic importance in many regions and interest in their management and aquaculture has increased greatly in recent years. This book provides a synthesis of biological and ecological characteristics of sea urchins that are of basic scientific interest and also essential for effective fisheries management and aquaculture. General chapters consider characteristics of sea urchins as a whole. In addition, specific chapters are devoted to the ecology of 17 species that are of major commercial interest and ecological importance. Features include: • A

synthesis of what is known about the basic biological characteristics of the sea urchin, useful for the direction of future research. • Case histories of 17 species that illustrate their ecological role in a variety of environments. • With the catastrophic decline in fisheries resulting primarily from over-fishing, it is essential that the populations be managed effectively and that aquaculture be developed. This book provides knowledge of the biology and ecology of the commercially important sea urchins that will contribute to these goals. • The only book available in present literature devoted to sea urchins. With this new title experts provide a broad synthetic treatment and in depth analysis of the biology and ecology of sea urchins from around the world, designed to provide an understanding of the group and the basis for fisheries management and aquaculture.
