Environment Abstracts

For courses in Civil Engineering Materials, Construction Materials, and Construction Methods and Materials offered in Civil, Environmental, or Construction engineering departments. This introduction gives students a basic understanding of the material selection process and the behavior of materials - a fundamental requirement for all civil and construction engineers performing design, construction, and maintenance. The authors cover the various materials used by civil and construction engineers in one useful reference, limiting the vast amount of information available to the introductory level, concentrating on current practices, and extracting information that is relevant to the general education of civil and construction engineers. A large number of experiments, figures, sample problems, test methods, and homework problems gives students opportunity for practice and review.

Notices of the American Mathematical Society

Alternative Press Index

Included in this volume are a selection of papers concerned with the application of computers to civil and construction engineering. The papers were presented at the Fifth International Conference on Civil and Structural Engineering Computing held 17-19 August 1993, Edinburgh.

CAD/CAM Abstracts

Volume is indexed by Thomson Reuters CPCI-S (WoS). The collection is aimed mainly at promoting the development of Green Building, Materials and Civil Engineering, at strengthening international academic cooperation and communication and at exchanging new research ideas. These proceedings will provide readers with a broad overview of the latest advances made in the field of Buildings, Materials and Civil Engineering.
