Turtle Geometry presents an innovative program of mathematical discovery that demonstrates how the effective use of personal computers can profoundly change the nature of a student's contact with mathematics. Using this book and a few simple computer programs, students can explore the properties of space by following an imaginary turtle across the screen. The concept of turtle geometry grew out of the Logo Group at MIT. Directed by Seymour Papert, author of

A High School First Course in Euclidean Plane Geometry is intended to be a first course in plane geometry at the high school level. Individuals who do not have a formal background in geometry can also benefit from studying the subject using this book. The content of the book is based on Euclid's five postulates of plane geometry and the most common theorems. It promotes the art and the skills of developing logical proofs. Most of the theorems are provided with detailed proofs. A large number of sample problems are presented throughout the book with detailed solutions. Practice problems are included at the end of each chapter and are presented in three groups: geometric construction problems, computational problems, and theorematical problems. The answers to the computational problems are included at the end of the book. Many of those problems are simplified classic engineering problems that can be solved by average students. The detailed solutions to all the problems in the book are contained in the Solutions Manual. A High School First Course in Euclidean Plane Geometry is the

The acclaimed novel of Jewish immigrant life on New York City's Lower East Side from the literary phenomenon known as the "Cinderella of the Tenements." It is Manhattan in the 1920s, and the Polish American Smolinsky family struggles to survive in their home on Hester Street. At ten years old, Sara, the youngest daughter, is keenly aware of the family's precarious financial situation. With food scarce, her unemployed and domineering father, a rabbi who spends his days studying, depends on the wages of his daughters. After years of watching him destroy the hopes and dreams of her three older sisters, Sara runs away, but forging a life for herself is not easy. She faces obstacles due to her background and gender, while working long days in a laundry and studying to become a teacher at night. Constantly rising above her circumstances—and her father's grasping reach—Sara finally finds happiness and love. Written in 1925 by Jewish American novelist Anzia Yezierska, *Bread Givers* describes "the emotional tone of an immigrant family in the dismal tenement of an overcrowded block of the east side of New York. It is a complex mood of grave joy and bottomless anguish, of Old World standards and New World values of hope and struggle and defeat and

More than eight decades since its publication, this novel is a gem in Jewish-American literature.” —The Pittsburgh Jewish Chronicle

Geometry involves objects and the shapes of those objects. Shapes of objects consist of points, lines and circles. Geometry is used daily in the form of construction, navigation, mapping, surveying, architecture, crime scene investigations and even in billiards. Most sports use a geometric sphere called a ball. Courts and playing fields are made of geometric circles, arcs and lines. Where a player stands or moves to involves geometry. A chart showing geometric shapes would help in understanding what geometry involves.
