Hotel Planning and Design

An investigation of thirty skyscrapers from around the world--both recently built and under construction--that explains the structural principles behind their creation

System Analysis and Modeling. Technology-Specific Aspects of Models

In recent years there has been a remarkable evolution in the design of hotels, with mainstream hotel chains rejecting characterless functionalism in favour of style-led individualism. This book gathers together over 40 of the best examples of hotel architecture and interiors from around the world, illustrating the impressive diversity of styles and forms. Identifying the latest industry trends, Riewoldt makes plain how both chains and independents have adopted individual design strategies to enhance their brand image in an increasingly global marketplace. It features the work of Michael Graves, Jean Nouvel and Philippe Starck amongst other big names.

Integrating Innovation in Architecture

Hotels and Resorts

The new student edition of the definitive architectural reference For seventy-five years, Architectural Graphic Standards has been the go-to reference for architects, builders, and engineers. Revised for the first time since 2000, Architectural Graphic Standards, Student Edition gives students their own handy resource. Carefully abridged from the Eleventh Edition of Architectural Graphic Standards, this Student Edition features the same richly detailed graphics and text that have made Architectural Graphic Standards a classic, but updated and reorganized in a way that is relevant to today's student. Thousands of illustrations and a rich index offer immediate access to hundreds of architectural elements, while the wide variety of topics covered makes this work relevant throughout a student's architecture education and into the early stages of professional practice. With a wealth of information for the student preparing for professional practice, this new edition: * Covers building standards and practices, materials and systems, and details for every type of project * Follows CSI's Unifomat, a classification system that closely matches an architect's workflow * Features completely updated content with a wide variety of standard architectural details * Offers an ancillary Web site featuring sample curriculums, student exercises, classroom projects, PowerPoint(r) slides, and more

Architecture Series: Bibliography

This book provides a complete guide to the development of hotels and resorts, covering all aspects of planning, market analysis, interior design and the installation of technical services. Fred Lawson's text is concise and the information easy to access. He examines the distinctive characteristics of different hotel types, identified by market and location, and specifies the special requirements of each type. Recognising the need for continuous maintenance and life-cycle refurbishment, a full chapter is devoted to these subjects and the business aspects of the hotel operation are considered. Throughout the book are numerous illustrations of projects showing outstanding examples of hotels and village resorts as well as current trends in design and development. Fred Lawson is well known as an hotel consultant and is now Visiting Professor at the University of Bournemouth. He has a number of successful books to his credit. As a leading international consultant he has been involved in major hotel and tourism projects in 35 countries including assignments for the World Bank, EC, UNDP and the World Tourism Organisation. The hotels featured include: Bali Hilton International, Oberoi Hotel - Bombay, Hotel Nikko - Australia, Guildford YMCA - UK, Meridien Hotel - Cairo, Turtel Sorgun Resort Village - Turkey. * Covers all aspects of planning and design, including marketing and investment appraisal * Logical framework and comprehensive coverage promotes handy reference use * Numerous examples provide practical help in application of principles

Routledge International Encyclopedia of Women

A modern computer program, such as the one that controls a rocket's journey to moon, is like a medieval cathedral—vast, complex, layered with circuits and mazes. To write such a program, which probably runs into a hundred thousand lines or more, knowledge of an object-oriented language like Java or C++ is not enough. Unified Modelling Language (UML), elaborated in detail in this book, is a methodology that assists in the design of software systems. The first task in the making of a software product is to gather requirements from the client. This well-organized and clearly presented text develops a formal method to write down these requirements as Use Cases in UML. Besides, it also develops the concepts of static and dynamic modelling and the Unified Process that suggests incremental and iterative development of software, taking client feedback at every step. The concept of Design Patterns which provide solutions to problems that occur repeatedly during software development is discussed in detail in the concluding chapters. Two appendices provide solutions to two real-life problems. Case Studies, mapping of examples into Java code that are executable on computers, summary and Review Questions at the end of every chapter make the book reader friendly. The book will prove extremely useful to undergraduate and postgraduate students of Computer Science and Engineering, Information Technology, and Master of Computer Applications (MCA). It will also benefit professionals who wish to sharpen their programming skills using UML.

Object-Oriented Analysis and Design Using UML

Building the Cold War

Comprising of the proceedings of the Sixth International Conference on Harmonisation between Architecture and Nature, the papers deal with topics such as building technologies, design by passive systems, design with nature, cultural

sensitivity, life cycle assessment, resources and rehabilitation as well as many others. This book follows five successful meetings which started in the New Forest, UK in 2006, then followed in the Algarve (2008), A Coruna (2010), Kos (2012) and Siena, Italy (2014). Eco-Architecture signifies a new approach to the design process intended to harmonise its products with nature. This involves concepts such as minimum use of energy at each stage of the building process, taking into account the amount required during the extraction and transportation of materials, their fabrication, assembly, building formation, maintenance and eventual future recycling. The adaptation of the architectural design to the natural environment, is another important issue. The book will be of interest to architects, engineers, planners, physical scientists, sociologists and economists and contained within these proceedings are case studies from many different places around the world. Topics covered consist of: Design with nature; Energy efficiency; Tall buildings and environment; Ecological impacts of materials; Biomaterials; Bioclimatic design; Water quality; Green facades; Ecological; Education and training; Adapted reuse; Transformative design; Sustainability indices in architecture; Bioclimatic design and passive systems; Recycle, reuse, reduce and recovery; Mixing it up and building flexibility; Architectural visualisation and New techniques: building information modelling.

Avery Index to Architectural Periodicals

In postwar Europe and the Middle East, Hilton hotels were quite literally "little Americas." For American businessmen and tourists, a Hilton Hotel—with the comfortable familiarity of an English-speaking staff, a restaurant that served cheeseburgers and milkshakes, trans-Atlantic telephone lines, and, most important, air-conditioned modernity—offered a respite from the disturbingly alien. For impoverished local populations, these same features lent the Hilton a utopian aura. The Hilton was a space of luxury and desire, a space that realized, permanently and prominently, the new and powerful presence of the United States. *Building the Cold War* examines the architectural means by which the Hilton was written into the urban topographies of the major cities of Europe and the Middle East as an effective representation of the United States. Between 1953 and 1966, Hilton International built sixteen luxury hotels abroad. Often the Hilton was the first significant modern structure in the host city, as well as its finest hotel. The Hiltons introduced a striking visual contrast to the traditional architectural forms of such cities as Istanbul, Cairo, Athens, and Jerusalem, where the impact of its new architecture was amplified by the hotel's unprecedented siting and scale. Even in cities familiar with the Modern, the new Hilton often dominated the urban landscape with its height, changing the look of the city. The London Hilton on Park Lane, for example, was the first structure in London that was higher than St. Paul's cathedral. In his autobiography, Conrad N. Hilton claimed that these hotels were constructed for profit and for political impact: "an integral part of my dream was to show the countries most exposed to Communism the other side of the coin—the fruits of the free world." Exploring everything the carefully drafted contracts for the buildings to the remarkable visual and social impact on their host cities, Wharton offers a theoretically sophisticated critique of one of the Cold War's first international businesses and

demonstrates that the Hilton's role in the struggle against Communism was, as Conrad Hilton declared, significant, though in ways that he could not have imagined. Many of these postwar Hiltons still flourish. Those who stay in them will learn a great deal about their experience from this new assessment of hotel space.

Lodging Hospitality

Enterprise Data Warehouse: Planning, building, and implementation

Travel and leisure is the world's largest and fastest growing industry. This book anticipates the increasing demand for diverse hotels, resorts, and leisure-time amenities now appearing worldwide. Hotel Design, Planning, and Development presents the range of significant hotel types being developed today and illustrates them in their full global array of settings. The book discusses the latest trends from guestrooms perched atop ultra-tall mixed-use towers to lavish desert villas shaded by high-rise structures to exotically themed resorts rising out of pristine tropical island waters. The book outlines essential planning and design considerations based on the latest data, supported by technical information and illustrations, including original plans. Analysis and theory supports each of the major trends that is presented, highlighting how the designer's work fits into the development of the industry as a whole, and giving a clear understanding of how successful new concepts develop. The experienced author team and their contributors represent both the professional and academic sides of the subject. In major sections covering Hotel Types, Design, and Development, they provide the developer, architect, designer, and hotel executive with a comprehensive and practical international overview of hotel design.

*Contains an excellent overview of the hotel industry, with international case studies and numerous illustrations *Includes vital technical information and covers a wide range of hotel types for comparison *Well-known author team represents both professional and academic sides of hotel design, planning and development

Architectural Graphic Standards

Hotel Design, Planning and Development presents the most significant hotels developed internationally in the last ten years so that you can be well-informed of recent trends. The book outlines essential planning and design considerations based on the latest data, supported by technical information and illustrations, including original plans, so you can really study what works. The authors provide analysis and theory to support each of the major trends they present, highlighting how the designer's work fits into the industry's development as a whole. Extensive case studies demonstrate how a successful new concept is developed. Hotel Design, Planning and Development gives you a thorough overview of this important and fast-growing sector of the hospitality industry.

Hotel Administration

Who's who in Interior Design

"This book provides a compendium of terms, definitions, and explanations of concepts in various areas of systems and design, as well as a vast collection of cutting-edge research articles from the field's leading experts"--Provided by publisher.

Progressive Architecture

Architects 49

Today's design professionals are faced with challenges on all fronts. They need not only to keep in step with rapid technological changes and the current revolution in design and construction processes, but to lead the industry. This means actively seeking to innovate through design research, raising the bar in building performance and adopting advanced technologies in their practice. In a constant drive to improve design processes and services, how is it possible to implement innovations? And, moreover, to assimilate them in such a way that design, methods and technologies remain fully integrated? Focusing on innovations in architecture, this book covers new materials and design methods, advances in computational design practices, innovations in building technologies and construction techniques, and the integration of research with design. Moreover, it discusses strategies for integrating innovation into design practices, risks and economic impacts. Through numerous case studies, it illustrates how innovations have been implemented on actual architectural projects, and how design and technical innovations are used to improve building performance, as well as design practices in cutting-edge architectural and engineering firms. Projects of all scales and building types are discussed in the book, ranging from small-scale installations, academic and commercial buildings to large-scale mixed-use, healthcare, civic, academic, scientific research and sports facilities. Work from design firms around the globe and of various scales is discussed in the book, including for example Asymptote Architecture, cepezed, CO Architects, Consarc Architects, FAAB Architektura, Gerber Architekten, HOK, IDOM-ACXT, MAD Architects, Morphosis Architects, SDA | Synthesis Design + Architecture, Studiotrope, Perkins+Will, Richter Dahl Rocha & Associés, Snøhetta, Rob Ley Studio, Trahan Architects, UNStudio and Zaha Hadid Architects, among many others.

Murphy/Jahn

With this practical book, architects, CTOs, and CIOs will learn a set of patterns for the practice of architecture, including analysis, documentation, and communication. Author Eben Hewitt shows you how to create holistic and thoughtful technology plans, communicate them clearly, lead people toward the vision, and become a great architect or Chief Architect. This book covers each key aspect of architecture comprehensively, including how to incorporate business architecture, information architecture, data architecture, application (software) architecture together to have the best chance for the system's success. Get a practical set of proven architecture practices focused on shipping great products using architecture Learn how architecture works effectively with development teams, management, and product management teams through the value chain Find updated special coverage on machine learning architecture Get usable templates to start incorporating into your teams immediately Incorporate business architecture, information architecture, data architecture, and application (software) architecture together

Restaurant and Hotel Design

Tri-part investigation of architecture, urbanism and design proposals. Critical analysis, sociological research and architectural projects. Critical position regarding the possibility of architecture to engage in the current socio political discourse. Analysis of the Kunsthal in Rotterdam and IJ Bank and Westerdok projects of the Dutch architect Rem Koolhaas. Description of the cities of Amsterdam, Rotterdam and Tokyo. Design proposal for architectural projects and urban research.

The Socius of Architecture

This is an "in-the-trenches" guide to deploying data warehouses that align tightly with your business objectives. Sperley delivers a practical, business-focused methodology that's flexible enough for any enterprise. The CD-ROM contains high-level project plans, sample data models, state-of-the-art data warehouse trialware, data warehousing Web links, and a demo you can use to show the practical value of data warehousing.

Thermal Performance of the Exterior Envelopes of Buildings III

Looks at resort, airport, convention, residential, luxury, and casino hotels, discusses facilities programming, guestrooms, public spaces, offices, service areas, and special systems, and considers feasibility studies and hotel operations

New Hotel Design

This book constitutes revised papers of the proceedings of the 9th International Workshop on System Analysis and Modeling, SAM 2016, held in Saint-Melo, France, in October 2016. The 15 full papers presented were carefully reviewed and selected from 31 submissions. The contributions are organized in topical theme named: Technology-Specific Aspects of Models. The volume reflects the five sessions of the conference. The first two sessions are closely aligned with the conference theme with a session on the Internet of Things and a session on Technology-specific Aspects. The other three sessions cover aspects regarding modeling languages and model-driven development in general and were organized in the sessions Languages, Configurations and Features, and Patterns and Compilation.
