B-Shifter: A Firefighter's Memoir

Monday, June 18, 2007. Nine firefighters lost. Many grieving families. An organization spiraling into crisis. Significant reasons for change. The Sofa Super Store Fire, one of the nation's deadliest incidents for firefighters since 9/11, marked the beginning of change. Change for people and the global landscape of emergency services. But how, specifically, did an emergency services organization in South Carolina learn at the individual, team, and organizational levels following this tragedy, and consequently, institute the needed changes for organizational development? After more than three years of in-depth research, Dr. David Griffin, the engineer on the first due engine of the Sofa Super Store Fire, studies how organizational processes and employee behaviors changed following this multiple line of duty death incident. The study centered on firefighters who officially

responded on June 18, 2007 to the deadly Sofa Super Store Fire in Charleston, SC. This is a scientific research study, not a story. Change did come. Find out how the concept of organizational learning led to the changes, and how you can institute this powerful concept in your organization. This study will save lives. A portion of all proceeds will benefit The National Fallen Firefighters Foundation. Visit drdavidgriffin.com for more information.

FSTA NEW Editions Streamline Driver/Operator Training The new editions of these bestselling IFSTA fire apparatus driver/operator training materials mark a new approach to training driver/operators. Previously, IFSTA published two separate manuals with student and instructor support materials: Pumping Apparatus Driver/Operator Handbook and Aerial Apparatus Driver/Operator Handbook. Fire departments with both types of apparatus needed two manuals, two curriculum and driver/operator trainees needed two exam preps to study for tests. The release of the 3rd edition of these manuals streamlines the IFSTA training resources. The Pumping Apparatus Driver/Operator Handbook, 3rd Edition covers pumping apparatus only, the second book in the pair, Pumping and Aerial Apparatus Driver/Operator Handbook, 3rd Edition contains the same 15 chapters as the pumping apparatus textbook, plus an additional 5 chapters relevant to aerial apparatus. Personnel on departments that operate both types of apparatus now only need one manual and one curriculum for training. Students only need one exam prep to prepare for testing. If a fire department does not use aerial apparatus, they use the Pumping Apparatus Driver/Operator Handbook, 3rd Edition

and omit the aerial sections of the curriculum and exam prep which include all 20 chapters. Chapters 2 and 3 are especially beneficial for all driver/operators: Inspection and Maintenance and Safety and Operating Emergency Vehicles. Pumping Apparatus Driver/Operator Handbook, 3rd edition Skill Sheets now included in the manual Key Terms added The new Fire Apparatus Manufacturer's Association (FAMA) standardized safety signs for fire apparatus are highlighted Hydraulic calculations presented in a logical sequence making teaching and learning easier Customary and metric calculations in one chapter NEW case histories introduce each chapter NFPA® 1002 JPR Correlation Matrix Arabic edition of Pumping Apparatus Driver/ Operator Handbook, 3rd Edition now available. Nfpa 1021

This is a "how to" book written by a "know how" person for anyone who practices firefighting strategy. Deputy Chief Vincent Dunn is passing on to the next generation of firefighters the lessons ("strategy summaries") he learned from his years of firefighting experience. He describes firefighting strategies for the most common types of fire scenarios and identifies specific firefighting problems presented to an incident commander by occupancy and construction type. More importantly, he explains firefighting solutions and offers firefighting plans, standard procedures, action plans, ideas, guidelines, explanations, key steps, and systems of firefighting procedures. This book is not about tactics. It's about strategy - plans of firefighting, logical ways to solve problems at fires.

Ray Downey wrote the first edition of *The Rescue Company* in the early 1990s. Building on Downey's legacy, John Norman has written *Fire Department Special Operations* to take into consideration the earth-shattering events, funding increases, research advances, expanded capabilities, and changes in regulations and standards that have widened the knowledge gap since the publication of Chief Downey's book. *Fire Department Special Operations* is an excellent guide for agencies and individuals in establishing, staffing, operating, and maintaining heavy rescue units in the many forms they may take. It is also an ideal training resource for the officers and individuals assigned the duties that a rescue firefighter must accomplish.

Essentials of Fire Fighting

Why do we continue to see similar firefighter injuries and line-of-duty deaths (LODDs) repeated each year? We often respond with technical solutions, such as more SOGs, safety lists, and studying more strategies and tactics. But are there greater depths of technical knowledge in our profession that can make firefighting significantly safer? Does it also help to look at the human side of our profession?

Other high-risk, high-consequence industries have reduced injuries and LODDs by 60%–80% just by focusing on human factors and performance. Turning your department into a higher reliability organization starts with building a learning culture and teaching firefighters to ask “why?” Authors Dane Carley and Craig Nelson have a passion for helping people and departments in the fire and emergency services become successful. The techniques, methods, and processes in this book are based their own research and data as well as studies from many other professions and industries interested in being the best. Readers will learn how to:

- Measure for and demonstrate leadership
- Focus solutions on human performance
- Build resilient departments
- Most importantly, reduce firefighter injuries and LODDs

Patient assessment may be the most challenging subject for EMS students to grasp, and there never seems to be enough time in the classroom for practice. Patient Assessment Practice Scenarios allows students to fine-tune their understanding of the patient assessment process. This BLS- and ALS-level text includes 150 EMS practice scenarios (75 trauma and 75 medical) that focus on the assessment process as dictated by the National Registry medical assessment and trauma assessment skill sheets. Each case is a script of an emergency call. The student and proctor (who may or may not be an instructor) may read through the case for rote practice of the assessment process, or the student may verbally work through the assessment process, with cues from the book read by the proctor. Cases may also be used as homework, in the classroom, or for self-study! This book is for BLS or ALS students who want to successfully learn patient assessment inside and out before actually working in the field, and any EMS provider who wants to refresh his or her assessment skills.

Fire and Emergency Services Company Officer

This new IFSTA manual details the training required of Company Officers according to NFPA® 1021, Standard for Fire Officer Professional Qualifications, 2014 Edition. The manual is divided into two sections to make a clear distinction between the information needed for Fire Officer Level I and Fire Officer Level II. Both print and eBook formats are available. There is no shortage of issues that a company officer might face in the everyday operation of a fire company or unit. This manual addresses the wide range of topics and issues encountered by a company officer, from leadership and supervision to health and safety issues. Great attention was given to focus on the job performance requirements of NFPA® 1021. The fifth

edition of Fire and Emergency Services Company Officer builds on the previous edition of the manual while presenting the material in a more concise manner to make it easier for students to read and instructors to teach. By merging related topics, the number of chapters was reduced from 32 in the fourth edition to 17 in the new manual while preserving the material related to the NFPA® standard. The number of appendices was reduced from 20 to 4 by removing information that can be found in other media. Along with reducing the volume of material from the fourth edition, the fifth edition of Fire and Emergency Services Company Officer offers several new features. The manual features a new look with IFSTA's single-column format and upgraded and updated curriculum components. Learning activities are included to help instructors present the material to their students. Case Histories open each chapter to illustrate important lessons learned in the real world. Photographs, illustrations, and tables are included throughout the manual to illustrate key points and improve the overall instructional value of the material.

course Modern solutions, procedures, and recommendations that put safety first. The Fire service has long been considered a profession plagued with a history of unavoidable tragedy. As the number of line-of-duty deaths and injuries continues to be staggering year after year, Fire and Emergency Services Safety and Survival exposes the false mentality of “doing whatever it takes” and provides solutions for both the individual and fire department. Built around the 16 Life Safety Initiatives developed by the National Fallen Firefighters Foundation, each chapter is written by a contributor with extensive expertise on the topic, incorporates FESHE and NFPA references guidelines, and helps readers understand how to execute procedures and recommendations for putting safety first. Filled with modern solutions, attainable goals, and real-life examples, the text asks each reader to challenge the existing attitudes toward safety and commit to making a change.
