The Official MP3.com Guide to MP3

A guide to the digital media technology covers hardware, software, installation, downloading and purchasing music, legal issues, and MP3 Web sites and search engines

How To Create Podcasts For Education

Flash animation, music and videos, virtual reality 3D, and more—in a PDF? Yes! Acrobat documents “converged” with audio, video, and interactive content— it's the wave of the future and it's called rich media. Do you want to get your video and audio content out into the world in a more convenient way than on the Web? Are you looking for a way to share rich-media content with the broadest possible range of readers? Print publishers, advertisers, educators, and anyone else who's ready to leverage the power of PDF and Adobe Reader can benefit from learning about the possibilities of this new convergence technology. In the first book of its kind, rich-media PDF pioneer Bob Connolly presents an eye-opening overview of the world of PDFs that contain video, audio, and interactive elements. Dozens of case studies illustrate the nearly limitless potential of rich media. And the best part about the book is that it practices what it preaches, with a fully interactive rich-media version of the book on the accompanying CDROM. Readers can experience

first-hand the power of rich-media PDFs through interactive animation, videos, and audio. Walk through the process of constructing rich-media PDFs on the fly using a Web server Learn which applications work together for building rich-media PDFs—and which don't See how some of the world's most forward-thinking artists and designers are pushing the boundaries with rich-media PDFs Learn why PDF documents are more compelling than Web sites for reaching your target audience Understand how best to translate print material into online PDF documents

The Backpacker's Handbook, 4th Edition

Global Sources Telecom Products

This book examines teachers' use of the major instructional technologies over the last century — from the days of silent film, radio, and slide shows through to the modern interactive whiteboard and the Web. The book explores the reasons why so few teachers have used these technologies and why, even in today's digital world, the most commonly used classroom tools are the pen, paper, and chalkboard. The book provides decision-makers with an invaluable insight into the million dollar question: What is required to get teachers using the appropriate instructional technology as a normal part of everyday teaching? Without question, student learning is enhanced by adopting these new technologies. Until now, research on why the majority of teachers use only the most basic tools in the classroom has been scarce. *The Use of Instructional Technology in Schools* examines this phenomenon and, most importantly, identifies what is required to achieve teachers' universal acceptance of instructional technologies.

New Perspectives [on] Computer Concepts

This book is the most up-to-date introduction to digital video and television. It is very suitable to university/college/arts students and video enthusiasts, by providing an accurate presentation, without too many mathematical/technical details. It covers all technologies related to video shooting/acquisition, editing, compression, optical storage, broadcasting and display. To this end, various video compression methods (MPEG-2, MPEG-4, HEVC) and broadcasting systems (ATSC, DVB, DTMB, ISDB) are overviewed. Novel trends in video streaming, webcasting and mobile video are presented. An overview of the latest trends in production, post-production and visual effects is presented for movie and TV content creation. Human perception of video and quality enhancement through video processing are detailed. Video analysis, description and archiving for fast video search are overviewed. Finally, novel trends in 3DTV and digital cinema are presented.

Learning with Online and Mobile Technologies

Infotech Student's Book

Made for Export 2010 Winter (No.604)

The turn of the millennium is characterized by exponential growth in everything related to communication – from the internet and email to air traffic. Tyranny of the Moment deals with some of the most perplexing paradoxes of this new information age. Who would have expected that apparently time-saving technology results in time being scarcer than ever? And has this seemingly limitless access to information led to confusion rather than enlightenment? Eriksen argues that slow time – private periods where we are able to think and correspond without interruption – is now one of the most precious resources we have. Since we are theoretically 'online' 24 hours a day, we must fight for the right to be unavailable – the right to live and think more slowly. It is not only that working hours have become longer – Eriksen also shows how the logic of this new information

technology has permeated every area of our lives. Exploring phenomena such as the internet, wap telephones, multi-channel television and email, Eriksen examines this non-linear and fragmented way of communicating to reveal how it affects working conditions in the economy, changes in family life and, ultimately, personal identity. Eriksen argues that a culture lacking a sense of its past, and therefore of its future, is effectively static. Although solutions are suggested, he demonstrates that there is no easy way out.

The Use of Instructional Technology in Schools

As the title indicates, this book highlights the shifting and emergent features that represent life online, specifically in and around the territory of elearning. Cybercultures in themselves are complex conglomerations of ideas, philosophies, concepts, and theories, some of which are fiercely contradictory. As a construct,

"cyberculture" is a result of sustained attempts by diverse groups of people to make sense of multifarious activities, linguistic codes, and practices in complicated and everchanging settings. It is an impossibly convoluted field. Any valid understanding of cyberculture can only be gained from living within it, and as Bell suggests, it is "made up of people, machines and stories in everyday life." Although this book contains a mix of perspectives, as the chapters progress, readers should detect some common threads. Technologymediated activities are featured throughout, each evoking its particular cultural nuances and, as Derrick de Kerckhove (1997) has eloquently argued, technology acts as the skin of culture. All the authors are passionate about their subjects, every one engages critically with his or her topics, and each is fully committed to the belief that elearning is a vitally important component in the future of education. All of the authors believe that digital learning environments will contribute massively to the success of the information society we now inhabit. Each is intent on exploration of the touchstone of "any time, any place" learning where temporal and spatial contexts cease to become barriers to learning, and where the boundaries are blurring between the formal and informal. This book is divided into four sections. In Part I, which has been titled "Digital Subcultures," we begin an exploration of "culture" and attempt to locate the learner within a number of digital subcultures that have arisen around new and emerging technologies such as mobile and handheld devices, collaborative online spaces, and podcasting. The chapters in this section represent attempts by the authors to demonstrate that there are many subdivisions present

on the Web, and that online learners cannot and should not be represented as one vast amorphous mass of "Internet" users.

Liquid Crystal Display Drivers deals with Liquid Crystal Displays from the electronic engineering point of view and is the first expressively focused on their driving circuits. After introducing the physical-chemical properties of the LC substances, their evolution and application to LCDs, the book converges to the examination and in-depth explanation of those reliable techniques, architectures, and design

solutions amenable to efficiently design drivers for passive-matrix and active-matrix LCDs, both for small size and large size panels. Practical approaches regularly adopted for mass production but also emerging ones are discussed. The topics treated have in many cases general validity and found application also in alternative display technologies (OLEDs, Electrophoretic Displays, etc.).
