Written for contractors and endorsed by the Associated General Contractors of America Written specifically for contractors, this "how-to" book enables you to meet the challenges of green building construction. You'll discover how constructing environmentally friendly, sustainable buildings influences project management, delivery, documentation, and risk. Moreover, the book guides you through these important considerations at all phases of a green construction project, including: Bidding and contracting Managing green design when the contractor works as a design builder Subcontracting Procurement Construction management Project commissioning and closeout This book is endorsed by the Associated General Contractors of America (AGC) and was written with the assistance and advice of a specially assembled AGC task force. With a focus on the green building process from the contractor's viewpoint, the book avoids endorsing any one green building rating system in favor of presenting the business fundamentals common to them all. Throughout the presentation, flowcharts and other features offer working tools for successfully managing green construction projects. Plus, real-world case studies developed through discussions with the actual contractors involved help you understand exactly what to expect and how to best manage constructing a green building. In short, this is one book that you need to have on hand to be a part of the rapidly growing green building movement.

Previously known as Estate Management Practice, the fourth edition of this work has been renamed to reflect current market practice and to embrace the discipline of corporate real estate. This book provides a comprehensive study of the management of urban property and is divided into three parts. Part one considers the diverse nature of the many types of estates and different aspects and interpretations of the management task. Part two concentrates on the management of leased property, repairs, service charges and rent reviews and the statutory framework within which the landlord and tenant relationship has developed. Part three is concerned with the positive management covering both technical skills, such as portfolio performance, and the professional practice environment in which they are exercised. Stapleton's Real Estate Management Practice is written both for advanced students and practitioners. It provides a firm basis for management affecting the decision-making hierarchy from tenant to property, to portfolio, to proprietary unit. While retaining the format of previous editions, it has been updated to reflect the many changes in the law, practice, technology

and the market place since the previous edition. In addition, this new edition highlights factors that influence the enhancement of different types of property and the various strategies involved in managing properties from both owners' and occupiers' point of view.

Unreliable real property data has been a long-standing problem for federal landholding agencies. Under the President's real property initiative, agencies are being held accountable for, among other things, improving the accuracy of their real property inventory and disposing of unneeded property. The U.S. Army Corps of Engineers, the fourth largest landholding agency, uses the Real Estate Management Information System (REMIS) for recording its civil works inventory. The author was asked to determine whether REMIS could provide reliable information on the Corps's civil works land disposals from FY 1996 through 2006. Includes recommendations. Charts and tables.

Proposed changes to the GAO Gov't. Audit Standards (the "yellow book.") These changes propose revision throughout the entire set of standards except for the 2nd general standard, independence, which is being revised separately. These revisions fall into 3 categories: GAGAS framework, consistent application of the standards where applicable to the various types of audits, and strengthening or streamlining the standards. Chapters: types of gov't. audits and attestation engagements (AE); general standards; field work standards, and reporting standards for financial audits and performance

audits; and general, field work, and reporting standards for AE.

This handbook introduces a methodical approach and pragmatic concept for the planning and design of changeable factories that act in strategic alliances to supply the ever-changing needs of the global market. In the first part, the change drivers of manufacturing enterprises and the resulting new challenges are considered in detail with focus on an appropriate change potential. The second part concerns the design of the production facilities and systems on the factory levels work place, section, building and site under functional, organisational, architectural and strategic aspects keeping in mind the environmental, health and safety aspects including corporate social responsibility. The third part is dedicated to the planning and design method that is based on a synergetic interaction of process and space. The accompanying project management of the planning and construction phase and the facility management for the effective utilization of the built premises close the book. The Authors Prof. em. Real Estate Law

"Agents are often better informed than the clients who hire them and may exploit this informational advantage. Real-estate agents, who know much more about the housing market than the typical homeowner, are one example. Because real estate agents receive only a small share of the incremental profit when a house sells for a higher value, there is an incentive for them to convince their clients to sell their houses too cheaply and too quickly. We test these predictions by comparing home sales in which real estate agents are hired by others to sell a home to instances in which a real estate agent sells his

or her own home. In the former case, the agent has distorted incentives; in the latter case, the agent wants to pursue the first-best. Consistent with the theory, we find homes owned by real estate agents sell for about 3.7 percent more than other houses and stay on the market about 9.5 days longer, even after controlling for a wide range of housing characteristics. Situations in which the agent's informational advantage is larger lead to even greater distortions"--National Bureau of Economic Research web site.

When you have worked in the real estate industry or property management field, you need to see "pictures" of resumes from others with similar backgrounds. (How much does it help you to look at resumes of nurses, CEOs, or teachers when you come to change fields or seek employment?) At last there is a book of resumes and cover letters tailored to your needs. See how professionals like you have shown their credentials and how they have used the specialized lingo of your field. This is YOUR resume book, written especially for you, if your background includes experience in real estate or property management -- or if you are trying to enter those fields for the first time. A book written just for you, by one of the most knowledgeable writers and editors who has specialized in helping job hunters.
