Curriculum Development for Medical Education

At a time when society is demanding accountability from the medical education system and residency review committees are demanding written curricula, this book offers a practical, yet theoretically sound, approach to curriculum development in medicine. Short, practical, and generic in its approach, the book begins with an overview of a six-step approach to curriculum development. Each succeeding chapter then covers one of the six steps: problem identification, targeted needs assessment, goals and objectives, education methods, implementation, and evaluation. Additional chapters address curriculum maintenance, enhancement, and dissemination. Throughout, examples are used to illustrate major points. An appendix provides the reader with a selected list of published and unpublished resources on funding, faculty development, and already developed curricula.

Critical Thinking Assessment in Nursing Education Programs

The effective use of school resources is a policy priority across OECD countries. The OECD Reviews of

School Resources explore how resources can be governed, distributed, utilised and managed to improve the quality, equity and efficiency of school education.

Clinical Reasoning

This practice-enhancing volume assembles the latest innovative thinking on working with clients who have both mental health diagnoses and substance use disorders. Diagnosis is a central focus of the coverage, untangling the often-knotty considerations surrounding dual diagnosis and the complex issues surrounding treatment even in frequently seen combinations (e.g., depression/alcohol abuse). The section on practice emphasizes meeting patients where they are and making use of their community, cultural, and spiritual contexts in crafting interventions. And the book's ambitious chapters on professional development describe training programs with the potential to produce the next generation of responsive, knowledgeable, and flexible therapists. Among the topics covered:

- Comprehensive assessment of substance abuse and addiction risk in adolescents.
- The relationship between attachment and addiction.
- Addiction in the community: the role of emergency services.
- Substance use during and after major crisis and disaster: a practitioner's guide.
- Practice, advocacy, and outreach: perspectives on addiction services.
- Teaching the importance of developing the therapeutic relationship.

New Directions in Treatment, Education, and Outreach for Mental Health and Addiction equips health and clinical

psychologists, social workers, and addiction counselors and educators with a well-rounded understanding of a growing population, and a wealth of perspectives on effective new interventions.

Now is a critical time in pediatric informatics. As information technologies—electronic health records (EHRs), personal health records (PHRs), computerized physician order entry (CPOE)—and standards (HL7) are developed to improve the quality of health care, it is imperative for policy makers and pediatricians to be aware of their impact on pediatric care and child health. Informed child advocates must be at the planning table as national and regional health information networks are developed to insure the unique health care needs of children are being met. *Pediatric Informatics: Computer Applications in Child Health* is a current digest of the important trends in pediatric informatics, written by leading experts in the field. This book explores how the management of biomedical data, information, and knowledge can optimize and advance child health. The contributors investigate the specific importance of pediatric informatics is derived from the biological, psychological, social and cultural needs that distinguish children from other populations. These distinctions create complexities in the management of pediatric data and information that make children a vulnerable population and require the development of a new body of knowledge in pediatric informatics.

Pediatric Informatics

An Australian text designed to address the key area of clinical reasoning in nursing practice. Using a series of authentic scenarios, Clinical Reasoning guides students through the clinical reasoning process while challenging them to think critically about the nursing care they provide. With scenarios adapted from real clinical situations that occurred in healthcare and community settings, this edition continues to address the core principles for the provision of quality care and the prevention of adverse patient outcomes.

Emerging Technology Platforms for Stem Cells

Developed through theoretical thinking and tested by nurse education researchers, the NLN Jeffries Simulation Theory helps to articulate phenomena that exist within clinical simulation. By establishing and communicating known relationships within these phenomena, this theory provides a strong foundation for research and education, and enables future discovery of best practices in simulation. Through rigorous research and literature review, and by incorporating the perspectives of nurses immersed in simulation activities, The NLN Jeffries Simulation Theory is an effective guide to implementation and further research.

Vegetarian and Plant-Based Diets in Health and Disease Prevention examines the science of vegetarian and plant-based diets and their nutritional impact on human health. This book assembles the science related to vegetarian and plant-based diets in a comprehensive, balanced, single reference that discusses both the overall benefits of plant-based diets on health and the risk of disease and issues concerning the status in certain nutrients of the individuals, while providing overall consideration to the entire spectrum of vegetarian diets. Broken into five sections, the first provides a general overview of vegetarian / plant-based diets so that readers have a foundational understanding of the topic. Dietary choices and their relation with nutritional transition and sustainability issues are discussed. The second

and third sections provide a comprehensive description of the relationship between plant-based diets and health and disease prevention. The fourth section provides a deeper look into how the relationship between plant-based diets and health and disease prevention may differ in populations with different age or physiological status. The fifth and final section of the book details the nutrients and substances whose intakes are related to the proportions of plant or animal products in the diet. Discusses the links between health and certain important characteristics of plant-based diets at the level of food groups Analyzes the relation between plant-based diet and health at the different nutritional levels, i.e. from dietary patterns to specific nutrients and substances Provides a balanced evidence-based approach to analyze the positive and negative aspects of vegetarianism Addresses the different aspects of diets predominantly based on plants, including geographical and cultural variations of vegetarianism

This book considers the proliferation in Malaysia over the past two decades of non-governmental organizations (NGOs) associated with various social movements, both to provide basic information about the NGOs and social movements, and to discuss their role in the development of civil society generally in particular their contribution to the reform movement, which has been gathering strength since 1998. The

book discusses the nature and development of the movements, and shows that those movements concerned with human rights and women's issues have made significant contributions to the reform movement and been irrevocably changed by their involvement in it.

Antibody–drug conjugates (ADCs) represent one of the most promising and exciting areas of anticancer drug discovery. Five ADCs are now approved in the US and EU [i.e., ado-trastuzumab emtansine (Kadcyla™), brentuximab vedotin (Adcetris™), inotuzumab ozogamicin (Besponsa™), gemtuzumab ozogamicin (Mylotarg™) and moxetumomab pasudotox-tdfk (Lumoxiti®)] and over 70 others are in various stages of clinical development, with impressive interim results being reported for many. The technology is based on the concept of delivering a cytotoxic payload selectively to cancer cells by attaching it to an antibody targeted to antigens on the cell surfaces. This approach has several advantages including the ability to select patients as likely responders based on the presence of antigen on the surface of their cancer cells and a wider therapeutic index, given that ADC targeting enables a more efficient delivery of cytotoxic agents to cancer cells than can be achieved by conventional chemotherapy, thus minimising systemic toxicity. Although there are many examples of antibodies that have been developed for this purpose, along with numerous linker technologies used to attach the

cytotoxic agent to the antibody, there is presently a relatively small number of payload molecules in clinical use. The purpose of this book is to describe the variety of payloads used to date, along with a discussion of their advantages and disadvantages and to provide information on novel payloads at the research stage that may be used clinically in the future.

Expertise in Nursing Practice, Second Edition

According to Webster's dictionary a crisis is a "decisive moment or an unstable or crucial time or state of affairs" in history. It is fashionable to suggest the early 21st century is a time of crisis. We are told by our leadership that crisis is on every hand. Indeed, when crisis does not materialize as quickly or as violently as one might expect, it seems civil leadership is not averse to creating "crisis." However, we are in the midst of crisis. The situation we face today is not economic, environmental, political or sociological. Instead, it is a crisis of leadership at the most elementary level. It is a crisis requiring a dramatic cultural shift in order to correct the course of history. As things now stand we are headed for disaster. Indeed, we are experiencing the slow unfolding of disaster all around us even today.

Corporate Crime in the Pharmaceutical Industry (Routledge Revivals)

Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states require extensive knowledge and up-to-date clinical information. An extensive knowledge of basic pathophysiology, as well as awareness of the appropriate diagnostic tests and treatments that are used to optimize care in the critically ill is essential. Since our first edition 7 years ago, new information crucial to the care and understanding of the critically ill patient has rapidly accumulated. Because this knowledge base crosses many different disciplines, a comprehensive multidisciplinary approach presenting the information is essential, similar to the multidisciplinary approach that is used to care for the critically ill patient. We have strived to provide this content in an easily digestible format that uses a variety of teaching tools to facilitate understanding of the presented concepts and to enhance information retention. To meet the demand to provide comprehensive and diverse education in order to understand the pathogenesis and optimum care of a variety of critical illnesses, we have substantially revised the prior topics in the first edition with updated information. We have also markedly expanded the number of topics covered to include acute lung injury and the acute respiratory distress syndrome, an

expanded discussion of the physiology and operation of mechanical ventilation, obstetrical care in the ICU, neurosurgical emergencies, acute coronary syndromes, cardiac arrhythmias, role of whole body rehabilitation in the ICU, ethical conduct of human research in the ICU, and nursing care of the ICU patient.

The Asian Development Bank, along with the people and institutions of Asia and the Pacific and the rest of the world, believes in the strength of partnerships and collective action. At the core of this belief is a desire to initiate and develop partnerships that will help governments address health care needs of growing populations, particularly women and children. Public-private partnerships (PPPs) have evolved from this need to relate to one another and work together. Governments recognize that they cannot do the job alone, particularly in the health sector where new disease patterns and the impact of climate change demand innovative solutions, such as PPP in health programs and enterprises. This guidebook offers readers a guide for the development of a PPP in pharmacy services through six simple, customizable steps. It looks at pharmacy services as an important

component of a well-rounded health care and hospital systems. Through sustainable PPP in pharmacy services, people will have access to safe, effective, and affordable medicines.
