Preserving Summer's Bounty

Yoga makes good athletes better. This time-honored discipline imparts flexibility, balance, and whole-body strength, creating improvements in an athlete's form, efficiency, and power. In addition, yoga's attention to concentration and breath awareness improves mental focus and mental endurance—hidden assets that become especially important at the end of a long training session or race. In *The Athlete's Guide to Yoga*, yoga instructor, endurance athlete, and coach Sage Rountree explains the benefits that yoga can bring to every training program. With hundreds of color photographs featuring more than 100 poses, this book treats common problem areas to make athletes stronger in their sport. Rountree helps athletes see progress from just 10 minutes of yoga each day. In an engaging and easy-to-follow style, *The Athlete's Guide to Yoga* presents: warm-up and cool-down routines for workouts simple poses to specifically target areas of inflexibility and overuse breath and meditation exercises different types of yoga for each phase of training recommendations for intensity and volume of yoga workouts throughout the training year Rountree's applications for training and racing ease the introduction to yoga, making it practical and accessible for all athletes.

Camping for Kids

The latest in the Home Front Detective series by master of historical fiction, Edward Marston. In June 1916, a young woman is found dead in a cinema. Harvey Marmion and Joe Keedy are assigned the task of finding the killer who fled in the dark. Before long, two more victims, of striking similarity but differing backgrounds, are found dead around the city. Meanwhile, miles from home, Marmion's son, Paul, prepares for life on the front line as he marches towards the Battle of the Somme.

The acclaimed author of *A Prayer for the Dying* brings all his narrative gifts to bear on this gripping account of tragedy and heroism—the great Hartford circus fire of 1944. It was a midsummer afternoon, halfway through a Ringling Brothers Barnum and Bailey Circus performance, when the big top caught fire. The tent had been waterproofed with a mixture of paraffin and gasoline; in seconds it was burning out of control. More than 8,000 people were trapped inside, and the ensuing disaster would eventually take 167 lives. Steward O'Nan brings all his narrative gifts to bear on this gripping account of the great Hartford circus fire of 1944. Drawing on interviews with hundreds of survivors, O'Nan skillfully re-creates the horrific events and illuminates the psychological oddities of human behavior under stress: the mad scramble for the exits; the perilous effort to maneuver animals out of danger; the hero who tossed dozens of children to safety before being trampled to death. Brilliantly constructed and exceptionally moving, *The Circus Fire* is history at its most compelling.

Dress Your Dog

This was my first book and a true labor of love. I spent decades studying steam and the work of Dead Men, in both old buildings and on library shelves. I traveled the country, haunting used-book stores, looking for engineering books that held the answers to questions that nagged at me. I was obsessed with this topic, and when I finally sat to write, I poured all that I had learned into this book, and as I wrote, I tried my best to make the words sound good to you - like we were together and having a conversation. I wanted you to know what I know and I wanted you to be able to do what I can do when it comes to old steam systems. This book arrived in 1992 and has since gone through dozens of printings. We've sold it in every state as well as in foreign countries. Steam heat is everywhere there are old buildings, so why shouldn't you be the one with the answers? Dan Holohan

Measuring just 2.5 x 4 cm with a simple black slipcase, *The Conquest of Space. Atlas for the Use of Artists and the Military* is an artist's book by Marcel Broodthaers originally published in 1975 in an edition of fifty numbered copies. As Broodthaers's last book, created shortly before his death in 1976, it embodies the artist's sardonic sense of humor with its plays on language and function - the title references the historic use of atlases by militaries for territorial conquests, but printed at such a miniature scale, it is unusable for its intended function. Furthering the level of intrigue with the book, Broodthaers did not follow established geographical organization, choosing rather to present only a small selection of countries organized in alphabetical order and graphically represented in identical size. This facsimile edition, published by The Museum of Modern Art, makes the artist's book available again for the first time since the original printing in 1975 in a limited edition of 500 copies.

Heating and Cooling of Buildings

The Heart of The Beast is a romantic adult full length novel loosely based on the fairytale Beauty and the Beast. Living a simple yet contented life with her family, Beauty must confront The Beast when her brother is ordered to be hanged for a crime he did not commit. Beauty must surrender her body to The Beast in exchange for her brother's freedom. Beauty is shocked to realize that somewhere deep down she finds The Beast attractive and despite his harsh reputation, to also have a seemingly sensitive side he does not readily admit to himself or anyone else. With time Beauty reveals how the power of love can overcome even the hardest heart. About the Author: Susan Kohler, a native Californian, is a writer of romantic/erotic fiction. She is also an active member in the spanking scene and has both seen and done most, if not all, of what she writes about. Her first three books, a full length spanking novel entitled The Paddle Club and two collections of short spanking stories entitled Hot Crossed Buns and Another Batch of Warm Buns were published in 2007.

Originally published in 1974, Arctic and Alpine Environments examines, the relatively simple ecosystems of arctic and alpine lands that still occupy extensive areas little disturbed by modern technology. The book argues that there is a necessity for carefully controlled development of the resources of these regions and suggests that there is a risk of irreversible disturbance without full understanding of these regions. This book provides a detailed documentation of cold-stressed arctic and alpine terrestrial environments and systematically deals with the present and past physical environment - climate, hydrology and glaciology; biota - treeline, vegetation, vertebrate zoology, and historical biogeography; abiotic processes - geomorphological and pedological and the role of man - bioclimatology, archaeology and technological impact,

including radioecology. The book will appeal to academics and students of environmental and biological science, as well as providing a significant source for conservationists', government agencies and industrial organizations.

This book enables circuit designers to reduce the errors introduced by the fundamental limitations (noise, bandwidth, and signal power) and electromagnetic interference (EMI) in negative-feedback amplifiers. The authors describe a systematic design approach for application specific negative-feedback amplifiers, with specified signal-to-error ratio (SER). This approach enables designers to calculate noise, bandwidth, EMI, and the required bias parameters of the transistors used in application specific amplifiers in order to meet the SER requirements.

Deeds of Darkness

The art and the science of building systems design evolve continuously as designers, practitioners, and researchers all endeavor to improve the performance of buildings and the comfort and productivity of their occupants. Retaining coverage from the original second edition while updating the information in electronic form, Heating and Cooling of Buildings: Design for Efficiency, Revised Second Edition presents the technical basis for designing the lighting and mechanical systems of buildings. Along with numerous homework problems, the revised second edition offers a full chapter on economic analysis and optimization, new heating and cooling load procedures and databases, and simplified procedures for ground coupled heat transfer calculations. The accompanying CD-ROM contains an updated version of the Heating and Cooling of Buildings (HCB) software program as well as electronic appendices that include over 1,000 tables in HTML format that can be searched by major categories, a table list, or an index of topics. Ancillary information is available on the book's website www.hcbcentral.com From materials to computers, this edition explores the latest technologies exerting a profound effect on the design and operation of buildings. Emphasizing design optimization and critical thinking, the book continues to be the ultimate resource for understanding energy use in buildings.
